

PostgreSQL Cheat Sheet - Job Board Project

List all tables

```
\dt
```

Describe a table

```
\d job_board_user
```

Select all rows

```
SELECT * FROM job_board_application;
```

Insert sample user

```
INSERT INTO job_board_user (id, username, email, password, role, phone_number) VALUES (gen_random_uuid(), 'alice', 'alice@example.com', 'hashedpassword', 'user', '+254700000001');
```

Insert sample company

```
INSERT INTO job_board_company (id, name, email, phone_number, description, location, website, industry) VALUES (1, 'TechCorp', 'hr@techcorp.com', '+254711222333', 'AI Solutions', 'Nairobi', 'https://techcorp.com', 'Software');
```

Insert sample job

```
INSERT INTO job_board_job (id, title, description, category_id, salary, deadline, employment_types, company_id) VALUES (5, 'Backend Developer', 'Work on Django APIs', 1, 150000, '2025-12-31 23:59:59', 'full_time', 1);
```

Insert sample application

```
INSERT INTO job_board_application (id, user_id, job_id, status, applied_at) VALUES (1, (SELECT id FROM job_board_user WHERE username='alice'), 5, 'pending', now());
```

Join query to view applications with details

```
SELECT a.id AS application_id, u.username, j.title, c.name AS company, a.status FROM job_board_application a JOIN job_board_user u ON a.user_id = u.id JOIN job_board_job j ON a.job_id = j.id JOIN job_board_company c ON j.company_id = c.id;
```
